Process Eviction

D3-PE

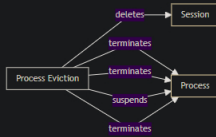

D3-PE (Process Eviction)

Definition

Process eviction techniques terminate or remove running process.

Artifact Relationships:

This defensive technique is related to specific artifacts. Click the artifact node for more information.

Technique Subclasses

There are 6 techniques in this category, **Process Eviction**.

Name	ID	Definition	Synonyms
Process Eviction	D3-PE	Process eviction techniques terminate or remove running process.	
- Process Termination	D3-PT	Terminating a running application process on a computer system.	
- Session Termination	D3-ST	Forcefully end all active sessions associated with compromised accounts or devices.	
- Process Suspension	D3-PS	Suspending a running process on a computer system.	
- Host Reboot	D3-HR	Initiating a host's reboot sequence to terminate all running processes.	
- Host Shutdown	D3-HS	Initiating a host's shutdown sequence to terminate all running processes.

Related ATT&CK Techniques:

These mappings are inferred, experimental, and will improve as the knowledge graph grows.

These offensive techniques are determined related because of the way this defensive technique, **d3:ProcessEviction**, **deletes** **Session**, **terminates** **Process**, **terminates** **Process**, **suspends** **Process**, and **terminates** **Process**.

Lateral Movement	Privilege Escalation	Discovery	Persistence	Initial Access	Execution	Credential Access	Defense Evasion
Remote Services	Event Triggered Execution	System Owner/User Discovery	External Remote Services	External Remote Services	Scheduled Task/Job	Exploitation for Credential Access	Use Alternate Authentication Material
Remote Desktop Protocol	Netsh Helper DLL		Event Triggered Execution	Trusted Relationship	Scheduled Task	OS Credential Dumping	Impair Defenses
SSH	Scheduled Task/Job		Netsh Helper DLL			LSASS Memory	Disable or Modify Tools
Use Alternate Authentication Material	Scheduled Task		Server Software Component			LSA Secrets	Modify Authentication Process
Remote Service Session Hijacking	Access Token Manipulation		Transport Agent			Security Account Manager	Access Token Manipulation
SSH Hijacking	Make and Impersonate Token		Web Shell			Multi-Factor Authentication Request Generation	Make and Impersonate Token
RDP Hijacking			Scheduled Task/Job			Modify Authentication Process	
			Scheduled Task				
			Modify Authentication Process
